Our Story

At Yale, we have a 180 year history of trusted innovation.

Everything we are today, we owe to the inspirational ingenuity of Linus Yale Senior and Linus Yale Junior. The Yale lock tradition started around 1840 when Linus Yale Senior opened up a lock shop specializing in expensive handmade bank locks. Inspired by a 4,000 year old Egyptian wooden lock, he built the first models of the pin-tumbler lock he had developed.

To manufacture them, he built a small lock factory in Newport, USA in 1847. His son, Linus Yale Junior, took up his father's trade. Technically very talented and with a number of ground-breaking inventions, he made his father's pin-tumbler lock design suitable for mass production in the early 1860's and changed the industry forever.

Linus Yale Junior and his colleague, Henry Towne, established the Yale & Towne Company in Stanford, Connecticut in 1868. By the early 20th Century, they employed more than 12,000 people and had expanded globally. Even today, the pin-tumbler lock by Linus Yale Junior is the most widely used type of door lock in the world.

Part of ASSA ABLOY Group since 2000, Yale is the leading residential brand of the Group.

Beside the world's most widely used type of door lock, Yale has produced numerous other innovative products such as digital door and cabinet locks, alarms, safes, doors, windows, access systems and hardware for doors and windows.

Yale is the brand behind locks of every design and function in over 125 countries.

All over the world, we're trusted to make homes secure and people feel secure, too.

Trusted every day since 1840

Yale is trusted by millions of people every day to keep what's important to them safe.

Our innovations have protected their homes, families and belongings for over 180 years. We have expanded from being a leader in mechanical lock engineering to innovating connected smart locks and homes.

Because we always make every effort to push the boundaries in a changing world.

We were there for your grandparents (and probably theirs) and we'll be there for your children.

Today, and every day to come.

Yale Trusted every day

Yale in the Middle East

Yale Middle East is the market leader in residential security solutions and offers an extensive range of products catering to the varied demands of the market. The products are handpicked from millions of product combinations globally, ranging from mechanical locks, smart products like alarms and cameras to door solutions and connected smart locks; and adapted to meet the diverse needs of consumers across the Middle East region. Yale first set foot in the Middle East with Lebanon in 1940, and today, has physical presence in 14 countries through some of the region’s top distributors, and online presence with key ecommerce accounts.

Yale Middle East not only offers its customers high quality products, but also ensures they enjoy an excellent after-sales experience. With an expert team of professionals trained on the latest products and technology, and a warranty period of 1-10 years across its products, Yale aims to instill trust and a sense of security for its consumers across the region, as these values are at the core of what we do.

Our customer care team is always available at your service - please call our toll free number for any assistance on Yale products.

Installation | Technical Support | Inquiries

Door Hinges

A hinge is a mechanical bearing that connects two solid objects, typically allowing only a limited angle of rotation between them. This is the first product in the door hardware category which is used during the installation of a door. For the smooth functioning and operation of a door, Yale offers hinges with ball bearing technology available in SS316, SS304 and SS201 grades of stainless steel.

201 Series	13
304 Series	14
316 Series	16

Door Direction

Depending on the pivot direction of a door, a door is classified as a left or right hand door. The door direction or side definition is according to the German standard DIN 107. Please note that this standard is different as compared to ANSI definition for left and right hand. Visible position of the door hinges on the left = DIN left and visible position of the door hinges on the right = DIN right.

Hinge Position Recommendation

- In the EN standard for hinges (EN 1935:2002) it is not specified where a hinge has to be fixed exactly. The recommendation shown below is only a guide and should be approved always as per the door specifications.
- Figure 1 – Use for medium weight doors. The benefit of this solution is that door will be held straight and won't warp.
- Figure 2 – Use for higher weight doors. This alternative is recommended when door closing device is fixed on the door.
- Figure 3 – Use for door height over 2,100mm. This solution is for constructions with a high risk of door warping.
- Figure 4 – Use for door height over 2,100mm. This version is especially recommended when door closers are fitted on the door.

Doors up to 2,100 height (3 hinges)

Doors over 2,100 height (4 hinges)

Adjusting Door Weight

Normally, three hinges are fitted to each door. Their positions are determined by the weight of the door and its resistance to warping or whipping. Hinge specification is also determined by the adjusted door weight (based on the actual weight supplied by the manufacturer). The factors by which the door mass has to be adjusted for excessive widths of door are calculated by dividing the door height by its width. For a factor of 2 or greater, no allowance has to be made. When the factor is less than 2, the door mass has to be increased by the value required to bring the factor to 2 expressed as a percentage. These percentages are shown in the side loading calculations table.

Door Size		Factor	Normal increase of Door Height mass of door leaf %
Door Height (mm)	Door Width (mm)		
2,000	1,000	2.00	0
	1,050	1.90	1
	1,100	1.82	18
	1,150	1.74	26
	1,200	1.66	33
	1,250	1.60	40

Doors of excess width, please refer to side loading calculation table		
Actual door weight	Door closer + 20%	= Adjusted door weight
	Door closer (Backcheck) + 75%	
	Extra heavy use + 10%	
	Light use - 10%	

Additional tables to aid understanding of EN 1935 2002
Digit 8 - hinge grade, regarding information on door mass and test cycles:

Table B shows the mass range of typical doors

Door type	Mass (kg)	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0–10.0	Light
Light internal, large wardrobes and large louvered doors	10.0–17.5	Light
Medium internal doors	17.5–25.0	Medium
Heavy internal doors	25.0–37.5	Medium
Heavy external doors	40.0–60.0	Heavy
Oversize or special external doors	55.0–110.0	Heavy

Table C gives estimated number of operations of typical doors and use. Failure to assess the likely frequency of operation of a door could lead to the specification of inadequate hinges and subsequent problems.

Door type	Cycles/day	Cycles/annum
High use/high duty situations:		
Large department store entrance	5,000	1,500,000
Large office building entrance	4,000	920,000
Cinema or theatre entrance	1,300	455,000
School entrance	1,250	225,000
Entrance door to school toilets	1,250	225,000
City centre shop entrance	1,000	300,000
Large city bank entrance	1,000	250,000
School corridor fire door	600	108,000
Town bank entrance	500	150,000
City centre restaurant entrance	500	150,000
Large office corridor fire door	450	104,000
Town centre shop entrance	400	120,000
Large office or factory toilet entrance	400	92,000

Door type	Cycles/day	Cycles/annum
Medium use/medium duty situations:		
School classroom door	80	15,000
Office door	75	18,000
Store toilet door	60	18,000
Dwelling front entrance	12	4,400
Dwelling rear or side door	15	5,400

BS EN Standards for Hinges

This standard provides details on product types, classification by use, test cycles, door mass, corrosion resistance, as well as definitions, product performance requirements, test apparatus, test methods and marking of products. In addition, the published standard includes annexes with details for special applications.

Scope

This European standard specifies requirements for single-axis hinges for windows and doors opening in one direction only, whose rotation axis is no more than 30mm from the face of the sash or door. It covers both fixed pin and lift-off hinges, and contains additional requirements for hinges intended for use on fire doors.

Classification

Digit 1 - Category of use
Four categories of use are identified:
grade 1: light duty
grade 2: medium duty
grade 3: heavy duty
grade 4: severe duty

Door type	Mass (kg)	Duty
Cupboard, wardrobe, cabinet, louvered doors and shutters	3.0 - 10.0	Light
Light internal large wardrobe and large louvered doors	10.0 - 17.5	Light
Office doors	17.5 - 25.0	Medium
Heavy internal doors	25.0 - 37.5	Medium
Heavy external doors	40.0 - 60.0	Heavy
Oversize special external doors	55.0 - 110.0	Heavy

Digit 2 - Durability
Three grades are identified for single-axis hinges manufactured to this European standard:
grade 3: 10,000 test cycles, for light duty hinges on windows only
grade 4: 25,000 test cycles, for light duty hinges on windows and doors
grade 7: 200,000 test cycles, for medium, heavy and severe duty hinges on doors only

Digit 3 - Test Door Mass
Eight door mass grades related to single-axis hinges are identified in this European standard as shown in Table 1 below.

Test door mass grade	Door mass
0	10 kg
1	20 kg
2	40 kg
3	60 kg
4	80 kg
5	100 kg
6	120 kg
7	160 kg

Digit 4 - Suitability for fire and smoke door use
Four categories of use are identified:
grade 0: not suitable for fire and smoke resistant door assemblies
grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the single-axis hinge to the fire resistance of the specified fire/smoke door assemblies
Such assessment is beyond the scope of this European standard (see EN 1634-1).

Digit 5 - Safety
Single-axis hinges are required to satisfy the essential requirements of safety in use. Therefore, only grade 1 is identified

Digit 6 - Corrosion Resistance
Five grades of corrosion resistance are identified in accordance with EN 1870:
grade 0: no defined corrosion resistance
grade 1: mild resistance
grade 2: moderate resistance
grade 3: high resistance

Digit 7 - Security
Two grades of security are identified for single-axis hinges:
grade 0: not suitable for use on burglar-resistant door assemblies
grade 1 : suitable for applications requiring a degree of security. Annex C of this European standard details the hinge grade to use for the level of security required

Digit 8 - Hinge Grade
Fourteen grades are identified in this European standard and are detailed in Table 2 below. The full classification is shown in the standard.

Hinge grade	Usage	Test cycles	Door mass
1	Window	10 000	10 kg
2	Window	10 000	20 kg
3	Window/Door	25 000	20 kg
4	Door	200 000	20 kg
5	Window	10 000	40 kg
6	Window/Door	25 000	40 kg
7	Door	200 000	40 kg
8	Window	10 000	60 kg
9	Window/Door	25 000	60 kg
10	Door	200 000	80 kg
11	Door	200 000	80 kg
12	Door	200 000	100 kg
13	Door	200 000	120 kg
14	Door	200 000	160 kg

SS 201 Hinges

Specifications:

- Butt hinge with ball bearings
- Stainless steel 201
- Square corners
- Can be used on doors of up to 120 kg

Features:

- Available in Stainless Steel Matt, Antique Brass & Polished Brass finishes

Hinge Size	Dimensions		
	A	B	C
4" x 3" x 3mm	102mm	76mm	3mm
4" x 3.5" x 3mm	102mm	89mm	3mm

Screws for timber

Metal door screws (to be purchased separately)

Disclaimer: SS201 Grade of hinges is recommended only to be used for internal doors and not in areas exposed to humidity.

SS 304 Hinges

Specifications:

- Butt hinge with ball bearings
- Stainless steel AISI 304
- Square corners
- Can be used on doors of up to 120 kg

Features:

- Available in Stainless Steel Matt, Stainless Steel Polished & Polished Brass finishes

Hinge Size	Dimensions		
	A	B	C
4" x 3" x 3mm	102mm	76mm	3mm

Door Closers

In order to close the door in a controlled speed, a door closer is used in order to prevent the door from slamming. Yale door closers come with speed controls and fire rating for best performance under all circumstances.

722 Pro Series	26
3500 Series	27

Rack & Pinion Technology

- Rack & Pinion is the mechanism used in Yale range of door closers
- As the door is opened, the arm is pulled around, rotating the pinion
- The pinion runs through the door closer body and its teeth engage with the teeth of a rack in a piston
- As the arm rotates the pinion, it in turn drives the piston down the cylinder bore
- The piston compresses the spring lying in the cylinder bore
- The energy used to open the door is stored in the spring and when the door is released the spring begins to expand which puts the process in reverse and the door closes
- The speed of closing is controlled by the hydraulic fluid in the system. It flows unrestricted in one direction as the door is opened but it has to make the return journey through valves
- These valves can be adjusted to control the rate of flow, and this governs the closing and latching speed

Door closer speed checks

a Closing speed
The exact setting of the closing speed guarantees a controlled closing of the door leaf.

b Latching action
The latching action controls the closing of the door and ensures the lock closes reliably. Therefore the door closer increases the speed of the door. The hydraulic latching action is reducing the speed of the door to achieve a softer closing of the door.

Fixing types

*Parallel arm to be purchased separately

BS EN Standards for Door Closers

There are two standards currently in existence for door closing devices:
EN 1154:1997 - Mechanical closers
EN 1155:1997 - Electronically controlled closers
EN 1154:1997 - Controlled door closing devices - requirements and test methods

Scope

This standard covers the requirement and test methods for durability, strength, security and function of all types of mechanical locks and latches (including associated or separately locking plates), intended for use on pedestrian doors in buildings. Excluding electro-mechanically operated locks and striking plates, multipoint locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks.

Classification

Digit 1 - Category of use
For all internal and external doors for use by the public, and others, with little incentive to take care, i.e. where there is some chance of misuse of the door.
Grade 3: For closing doors from at least 105° open
Grade 4: For closing doors from 180° open
Note 1: Grade 4 classification assumes standard installation according to the manufacturer’s instructions.
Note 2: For applications subject to extremes of abuse, or for particular limitations of opening angle, door closers incorporating backcheck function or provision of a separate door stop should be considered.

Digit 2 - Number of test cycles
Only one test duration is identified for the door closing device manufactured to this standard: Grade 8: 500,000 cycles

Digit 3 - Test Door Mass/size
Seven test door mass grades and related door closer power sizes are identified according to below table of this standard. Where a door closer provides a range of power sizes both the minimum and maximum sizes shall be identified.

Test Door Mass and Recommended Door Widths		
Power size of closer	Max. mass of leaf	Width of test door leaf
1	20 kg	<750mm
2	40 kg	850mm
3	60 kg	950mm
4	80 kg	1,100mm
5	100 kg	1,250mm
6	120 kg	1,400mm
7	160 kg	1,600mm

Digit 4 - Fire behavior
Grade 0: Not suitable for use on fire/smoke door assemblies
Grade 1: Suitable for use on fire/smoke door assemblies, subject to satisfactory assessment of the contribution of the emergency device to the fire resistance of specified fire/smoke door assemblies

Digit 5 - Safety
All door closers are required to satisfy the Essential Requirement of safety in use contained in the Construction Products Directive by the EU. Therefore only **Grade 1** is identified.

Digit 6 - Corrosion Resistance
Five grades are identified according to EN 1670:
Grade 0: No defined corrosion resistance
Grade 1: Low resistance
Grade 2: Moderate resistance
Grade 3: High resistance
Grade 4: Very high resistance

Download Door Closer EN Standards or Certifications

Classification code

:3:8:2/5:0:1:0

Example:

The following marking denotes a closer capable of opening to at least 105°, and with a range of power sizes from size 2 to size 5. Note that as the 4th digit is zero, such a closer would not be suitable for fire door use.

Fire resisting doors

EN 1154 makes the following recommendations as to the feature considered necessary for such devices when they are fitted to fire and smoke resisting doors.

- a) The door closer when installed in accordance with the manufacturer’s installation instruction shall be capable of closing the test door from any angle to which it may be opened.
- b) Due to their low closing moments, door closers sizes 1 and 2 are not considered suitable for use on fire/smoke resisting door assemblies. Door closers with adjustable closing force shall be capable of adjustment to at least power size 3.
- c) The door closer shall not include a hold open device unless it is electrically powered device in accordance with EN 1155.

- d) Control regulators shall be either concealed or operable only by means of a tool.
- e) The design of a door closer shall be such that it is not possible to inhibit its closing action in any way without the use of a tool.
- f) Any incorporated delayed action function shall be capable of adjustment to less than 25 seconds between the door closing angle of 120° and the end of the delay zone.
- g) The door closer representative of its model shall have been incorporated in a door assembly that has satisfied the appropriate criteria of a fire test. The test shall have been on a full size assembly in accordance with EN 1634-1.

EN 1155: 1997 - Electrically powered hold open devices for swing doors - requirements and test methods

Scope

The standard specifies requirements for separate electrically powered hold-open devices and also for hold-open mechanisms incorporated in a door closer. Whilst these devices may incorporate smoke or fire detection elements, the performance of these particular elements is outside the scope of EN 1155.

CE conformity

Where a door closing device has a CE certificate of conformity, this will be shown. Hence, it is stated in 8300 that all fire doors must have closing devices that are CE marked.

We give below a guide to the terminology used in connection with door closing devices.

Backcheck

A device built into the closer that checks the outward swing of the door. The backcheck damping is inversely proportional to the speed of the outward swing of the door. It should not be regarded as a door stop.

Closing speed

The speed with which the door is closed. Normally adjustable.

Closing force

The power that the closer exerts to close the door. Measured in the EN standard from 1-6. See table below.

Latching action

The door movement becomes accelerated in the last few degrees of closing, in order to be able to overcome any resistance, such as seals, latch bolts, etc.

Delayed action

The closing speed of the door is reduced to minimal or the door stops, for a preset period, to allow passers-by sufficient time to pass through the door opening, i.e. elderly persons, hospital staff with beds, etc.

Fire resistance and smoke control

- Tested for fire resistant and smoke control doors.
- The use of a hold-open device on fire resistant and smoke control doors are not permitted or they are not tested for resistance and smoke control.

Hold open

This is a device to enable the closer to be held in the open position, usually at 90°, but some are variable in the opening degree. These closers must not be used on fire doors. (except where they are electronically controlled to close when the fire alarm is sounded).

Door stops

Always use a door stop, where practicable, whether a closer has a backcheck or not. This may take the form of a floor mounted version, wall/ skirting mounted version or built-in as found with guide rail closers. The positioning of the stop is also important, and must be at least 66% (2/3rds) the door width away from the hinge, otherwise the stop acts as a fulcrum and could damage the door, the frame and the hinges. Where there is a maximum angle of opening stated the stop must be positioned at that point, otherwise damage to the closer will occur.

Note

Please ensure that the correct closing device is the appropriate one for the job it is intended to do and that it is the correct size. Too many closers are under specified, purely in an effort to reduce costs.

Size	Maximum door width (mm)	Minimum closing moments (N.m)
1	750	9
2	850	13
3	950	18
4	1,100	26

Datasheet

Overhead Door Closer

722 Pro Series

Specifications:

- Tested up to 500,000 cycles
- Up to 120 mins fire rated for timber doors
- Up to 240 mins fire rated for steel doors
- Adjustable latching speed

Features:

- Rack and Pinion mechanism
- Maximum door width: 1100mm
- Maximum door weight: 80kg
- EN 1154 Classification: 3 8 4/2 1 1 3
- Die cast aluminium body
- Anti-freeze and fire-proof, suitable for working at -42°C to 55°C
- Available in black, white, brown, silver & gold
- Corrosion resistance: EN1670 Grade 3
- Max. opening angle is 180° (EN2/EN3) and 130° (EN4)

Overhead Door Closer
3500 Series

Specifications:

- CE marked
- Casted aluminium body
- Closing and latch speed adjustable by regulating valves

Features:

- Tested up to 500,000 cycles for closing and opening of the door closer for extreme durability
- Suitable for left or right handed doors
- Maximum door width: 1100mm
- Maximum door weight: 80kg
- Fire resistant
- Available in silver, white, brown, black & gold finishes

Lever Handles

Lever handles are used both as a decorative piece and for the smooth operation of the door and door lock. Yale offers a wide variety of lever handles in Stainless Steel, Brass, Zinc Alloy, and Aluminium material, available in different surface finishes.

Decorative Stainless Steel Handles	33
Aluminium Black Lever Handles	38
Aluminium Lever Handles with Rosette	41
Handles for Aluminium & PVC Doors	48
Decorative Handle Knobsets	49

Criteria for Lever Handle Selection

Aesthetics

If the architect is using curves in the overall design, and in features such as vision panels in the doors, square-section levers and rectangular back plates will be a mismatch.

Is it the right thickness and weight?

High end specifications require a good solid feel. Other projects might only need lighter pattern handles.

What finishes are available?

In some projects there might be a need for colored door furniture, or maybe brass or polished chrome. The important/public parts of the building might have expensive finishes, and the "back of house" non-public areas might have the same lever design but in a regular finish.

Are the fixings concealed or exposed?

- Most commercial grade furniture has concealed fixings to prevent tampering or unauthorized removal.
- Low cost housing furniture might have exposed fixings.

Functionality

- Will it be suitable for the purpose it will be used for?
 - Corrosion resistance?
 - Is durability an issue?
 - Does the lever stop your hand from sliding off?
- Could it catch on sleeves or loose clothing as you walk by?
- What kind of fixings are needed?
 - Will simple screw-fixing be enough, or should the furniture be back-to-back fixed with through-bolts, in order to survive heavy duty use?

Ways to operate a door

Door hardware is a general term used for products which are fixed to doors to enable or enhance their function.

Door furniture (levers and knobs) includes below types of fittings:

- Pull handles
- Protection plates
- Front door furniture
- Door stops

Door furniture is a term used to describe hardware that is surface-mounted on the door, and which is used to open or close the door.

Lever Handles
EN Standards

Lever Handle Installation Guide

1

Prepare Door

- Determine your nominated handle position vertically using a tape measure.
- Then, draw a horizontal centerline using a spirit level at desired height - this line should extend inwards at least 80mm from door edge.
- Repeat above steps on opposite door side, door end - face and door frame.

We suggest between 900-1050 mm for typical new plain door installations.

2

Prepare Screws

- Cut screws appropriate to door thickness.
- Ensure the screw does not stick out of the rose once installed.

3

Install Lever Sets

- Place the spindle and springs (if required) into the latch as shown.
- Install each half set, ensuring you have levers springing downwards.
- Insert two cut off screws of correct length through holes at 3 and 9 o'clock positions and tighten.
- The two remaining woodscrews can be positioned at the 12 and 6 o'clock positions for added strength.

4

Install outer rose cover

- Install the outer rose cover over the inner rose by sliding it over the lever.
- Attach round rose covers by screwing onto the inner rose.

For square covers only: Grub screw should be located on the bottom of the rose cover when placed on the door.

Decorative Stainless Steel Handles

Elisa Series

Specifications:

- Stainless steel AISI 304
- Rosette Ø54 x 8mm
- Sprung lever
- Spindle 8x8mm
- Matching escutcheons for euro cylinder

Features:

- Conforms to EN 1906:2012 - Grade 4
- Tested to 200,000 cycles
- Finish options: Stainless Steel Matt, Polished Stainless Steel, PVD Gold & Antique Brass

Aluminium Lever Handles with Rosette Milano Series

Specifications:

- Aluminium lever with spring mechanism
- Zinc alloy rosette and escutcheon Ø54x9mm
- Electroplated finishes
- Spindle (8x8mm) and fixings included
- Spindle with secure grub screw fixing

Features:

- Suitable for locks with 8mm square hub
- Rosette with threaded base and cover
- Satin nickel and antique brass finishes
- Suitable for doors 35-50mm thick
- Recommended for internal doors

Pull Handles

Pull handles are named after their shapes, and require to be strong and durable as they are constantly being pulled in order to open the door they are affixed to. Yale offers a range of pull handles suitable for both wooden and glass doors, available in both through and back-to-back fixing types.

Mortice Locks

Yale offers a diverse range of door locking solutions, with mortice locks that are perfectly suitable for residential doors like entrance and internal doors, as well as common area doors like fire exit and double leaf doors. Using high quality stainless steel and ensuring high precision throughout the manufacturing process, Yale guarantees exceptional durability, security and performance for it's mortice locks.

Mortice Locks

Door Direction

Depending on the pivot direction of a door, a door is classified as a left and right hand door. The door direction or side definition according to DIN 107 is determined as follows:

- Visible position of the door hinges on the left = DIN left
- Visible position of the door hinges on the right = DIN right

In accordance with the door directions, the mortice locks are also classified as DIN left and DIN right hand locks:

DIN left hand lock
(the straight side
of the latch points
to the left)

DIN right hand lock
(the straight side
of the latch points
to the right)

Profile of a rebated door with mortice lock
(forend protrudes on one side)

Profile of a flush door with mortice lock
(forend protrudes on both sides)

Latches kit with cover bars

- 1 Forend
 - 2 Latch
 - 3 Deadbolt
 - 4 Screw channel for profile cylinder
 - 5 Tumbler
 - 6 Tumbler spring
 - 7 Key action
 - 8 Lever follower
 - 9 Counter spring
- a Backset
b Distance
c Case height
d Case width
e Forend length
f Forend width

BS EN Standards for Mortice Locks

Scope

This standard covers the requirement and test methods for durability, strength, security and function of all types of mechanical locks and latches (including associated or separately locking plates), intended for use on pedestrian doors in buildings. Excluding electro-mechanically operated locks and striking plates, multipoint locks and their locking plates, locks for windows, padlocks, locks for safes, furniture locks and prison locks.

Classification

The standard classifies locks and latches using the 11 digit coding system. Each digit relates to a particular feature of the product measured against the standards performance requirements.

Digit 1 - Category of use

Classification is in three grades, grade 1 being the lowest

Grade 1: Low frequency. For use by people with a high incentive to exercise care and a small chance of misuse, e.g internal residential doors.

Grade 2: Medium frequency. For use by people with some incentive to exercise care but where there is some chance of misuse, e.g. internal office doors.

Grade 3: High frequency. For use by public or others with little incentive to exercise care and with a high chance of misuse, e.g. public doors

Digit 2 - Durability

Twelve grades of durability are identified:

Grade A: 50,000 cycles, no load on latch bolt

Grade B: 100,000 cycles, no load on latch bolt

Grade C: 200,000 cycles, no load on latch bolt

Grade F: 50,000 cycles, 10N load on latch bolt

Grade G: 100,000 cycles, 10N load on latch bolt

Grade H: 200,000 cycles, 10N load on latch bolt

Grade L: 100,000 cycles, 25N load on latch bolt

Grade M: 200,000 cycles, 25N load on latch bolt

Grade R: 100,000 cycles, 50N load on latch bolt

Grade S: 200,000 cycles, 50N load on latch bolt

Grade W: 100,000 cycles, 120N load on latch bolt

Grade X: 200,000 cycles, 120N load on latch bolt

Digit 3 - Door mass and closing force

Nine grades of door mass and closing force are identified:

Grade 1: Up to 100 kg door mass; 50N maximum closing force

Grade 2: Up to 200 kg door mass; 50N maximum closing force

Grade 3: Up to 200 kg door mass or specified by the manufacturer; 50N maximum closing force

Grade 4: Up to 100 kg door mass; 25N maximum closing force

Grade 5: Up to 200 kg door mass; 25N maximum closing force

Grade 6: Up to 200 kg door mass or specified by the manufacturer; 25N maximum closing force

Grade 7: Up to 100 kg door mass; 15N maximum closing force

Grade 8: Up to 200 kg door mass; 15N maximum closing force

Grade 9: Up to 200 kg door mass or specified by the manufacturer; 15N maximum closing force

Digit 4 - Fire resistance

Two grades of suitability for use on fire/smoke doors are identified:

Grade 0: Not suitable for use on fire/smoke door assemblies

Grade 1: Suitable for use on fire/smoke door assemblies tested to EN 1634-1 etc.

Note 1: A grade 1 classification means only that the lock has been designed for use on fire/smoke control doors; the actual fire performance achieved (e.g. fire integrity of 30 minutes on a partially glazed timber door etc.) will be contained in a separate fire test report.

Note 2: Where a product is intended for fire/smoke use (i.e. "1" in box 4), it must be possible to demonstrate compliance with the Essential Requirements of the Construction Products (Amendments) Regulations.

It is recommended that the product should bear the CE mark.

Digit 5 - Safety

Only one grade of safety is identified:

Note: A lock or latch conforming to this standard can, at the same time, also be part of an exit device conforming to EN 179 or EN 1125

Digit 6 - Corrosion resistance and temperature

Eight grades of corrosion resistance are identified:

Grade 0: No defined corrosion resistance; no temperature requirement

Grade A: Low corrosion resistance; no temperature requirement

Grade B: Moderate corrosion resistance; no temperature requirement

Grade C: High corrosion resistance; no temperature requirement

Grade D: Very high corrosion resistance; no temperature requirement

Grade E: Moderate corrosion resistance; temperature requirement: from -20°C to +80°C

Grade F: High corrosion resistance; temperature requirement: from -20°C to +80°C

Grade G: Very high corrosion resistance; temperature requirement: from -20°C to +80°C

Digit 7 - Security and drill resistance

Seven grades of security and drill resistance are identified:

Grade 1: Minimum security and no drill resistance

Grade 2: Low security and no drill resistance

Grade 3: Medium security and no drill resistance

Grade 4: High security and no drill resistance

Grade 5: High security with drill resistance

Grade 6: Very high security and no drill resistance

Grade 7: Very high security with drill resistance

Digit 8 - Field of door application

Fifteen grades of door application are identified in the table below:

Grade	Type	Power size of closer	Max. mass of leaf	Width of test door leaf
A	Mortice	Unrestricted application	-	-
B	Mortice	Hinged door	-	-
C	Mortice	Sliding door	-	-
D	Rim	Unrestricted application	-	-
E	Rim	Hinged door	-	-
F	Rim	Sliding door	-	-
G	Bored lock	Unrestricted application	-	-
H	Mortice	Hinged door	Supported	-
J	Rim	Hinged door	Inwards	-
K	Mortice	Hinged door	-	Locked from inside
L	Mortice	Sliding door	-	Locked from inside
M	Rim	Hinged door	-	Locked from inside
N	Rim	Sliding door	-	Locked from inside
P	Mortice	Hinged door	Supported	Locked from inside
R	Rim	Hinged door	Inwards	Locked from inside

Grade H: Minimum eight detaining elements, extended number of effective differs
Note: This applies only to lever locks: cylinders are assessed to BS EN 1303: 1998

Classification code:
:2:H:5:1:0:E:5:A:F:2:C:

Code shown using DHF graphic icons:
EN 12209

EXAMPLE:

This indicates a mechanically operated lock and locking plate intended for use in situations where there is an incentive to exercise care; that will withstand a durability of 200,000 cycles with 10N side load on the latch bolt on a door of up to 200 kg in mass; that will close with a maximum force of 25N; that is suitable for use on a fire/smoke resisting door; that has no safety requirement; that has moderate corrosion resistance over a temperature range of -20°C to +80°C; that has high security and drill resistance; that is suitable for unsprung furniture; and that has five detaining elements with a minimum of 10,000 differs.

Digit 9 - Type of key operation and locking

Nine grades of type of key operation and locking are identified:

Grade 0: Not applicable

Grade A: Cylinder lock or latch; manual locking

Grade B: Cylinder lock or latch; automatic locking

Grade C: Cylinder lock or latch; manual locking with intermediate locking

Grade D: Lever lock or latch; manual locking

Grade E: Lever lock or latch; automatic locking

Grade F: Lever lock or latch; manual locking with intermediate locking

Grade G: Lock or latch without key operation; manual locking

Grade H: Lock without key operation; automatic locking

Download
Mortice Locks
EN Standards

Digit 10 - Type of spindle operation

Five grades of spindle operation are identified:

Grade 0: Lock without follower

Grade 1: Lock with sprung lever or knob

Grade 2: Lock with light unsprung lever

Grade 3: Lock with heavy unsprung lever

Grade 4: Lock with manufacturer's own specification furniture

Digit 11 - Key identification

Nine grades of key identification are identified:

Grade 0: No requirement

Grade A: Minimum three detaining elements

Grade B: Minimum five detaining elements

Grade C: Minimum five detaining elements, extended number of effective differs

Grade D: Minimum six detaining elements

Grade E: Minimum six detaining elements, extended number of effective differs

Grade F: Minimum seven detaining elements

Grade G: Minimum seven detaining elements, extended number of effective differs

H Series

72mm Sashlock

Specifications:

- Heavy duty sashlock with 72mm centres
- Backset 55mm with option of 60mm on request
- Follower 8x8mm
- Through fixing holes with 38mm centres
- Stainless steel 304 front and strike plate
- Square front and strike plate with option for radius type on request
- Stainless steel 304 latch and deadbolt
- 20mm double throw deadbolt

Features:

- Latch operated by handle or cylinder
- Reversible for left or right hand door

Classica Lock Series
85mm Sashlock

Specifications:

- Lock case with 85mm centres
- Standard backset 45mm - other backsets available on request
- Follower 8x8mm
- Through fixing holes with 38mm centres for rosette handles.
- Brass latch and steel deadbolt
- Steel front and strike plate with option of stainless steel
- 20mm double throw deadbolt

Features:

- Forend 23mm with square edge
- Centre to centre 85mm
- DIN holes on cylinder
- Backsets 40, 45 and 50mm
- Flat strike plate included
- Fixing screws for lock, strike plate and cylinder included

Classica Lock Case with Extended Strike

85mm Sash lock

Specifications:

- Center distance 85mm
- Backset 45mm
- Follower 8x8mm
- Through fixing holes with 38mm center distance for rosette handles
- Brass latch and steel deadbolt
- Steel front and strike plate with option of stainless steel
- 20mm double throw deadbolt
- Suitable for high door & frame thickness due the extended strike plate in the kit
- Includes dust box

Features:

- Finish options - Satin Nickel, Polished Brass
- Latch and deadbolt finish matched with front plate
- Latch operated by handle or cylinder

Nightlatches

Commonly found on home front doors, nightlatches are mounted to doors that open inwards and are mounted to the inner surface of the door. The nightlatch automatically latches the door shut once its closed. Yale offers a range of nightlatches suitable for wooden doors featuring a child safety button, and available in elegant designs and different finishes to suit your home interiors.

Cylindrical Knobsets - Grade 2 Brandy (Rosette 75mm)

Specifications:

- Stainless steel or brass knobs
- Rosette 75mm wide
- No exposed mounting screw
- 6 pin brass cylinder, brass plug and brass housing (3 keys)
- Standard backset, fixed latch 60mm or 70mm available, latch bolt is stainless steel construction, it is UL fire latch
- Suitable for door 35-45mm thick
- Stainless steel knob with SS faceplate and strike, other finish knobs with brass faceplate and strike

Features:

- Conforms to ANSI Grade 2 requirements
- Available finishes: SSS-Stainless Steel (US 32D), PB-Polished Brass (US3), AB-Antique Brass (US5), AC-Antique Copper (US11), DC-Satin Nickel (US15), PSS-Polished Stainless Steel (US32)

Cylindrical Knobsets - Grade 3 Brandy Glass (Rosette 75mm)

Specifications:

- Stainless steel or brass knobs
- Rosette 75mm wide
- 5 pins cylinder, brass plug and zinc alloy housing (3 keys)
- Entrance knobset and passage knobset with adjustable latch
- Suitable for door 35-45mm thick
- Privacy function knobset with fixed latch, 60mm backset or 70 mm backset on request
- Square faceplate and strike in 304 Stainless Steel material
- Zinc alloy latch bolt

Features:

- Conforms to ANSI Grade 3 requirements
- Available finishes: SSS-Satin Stainless Steel (US32D), PB-Polished Brass (US3), AB-Antique Brass (US5), AC-Antique Copper (US11), DC-Satin Nickel (US15), PSS-Polished Stainless Steel (US32)

Cylindrical Knobsets - Grade 3 Carolina (Rosette 75mm)

Specifications:

- Stainless steel or brass knobs
- Rosette 75mm wide
- 5 pins cylinder, brass plug and zinc alloy housing (3 keys)
- Entrance knobset and passage knobset with adjustable latch
- Suitable for door 35-45mm thick
- Privacy function knobset wtih fixed latch, 60mm backset or 70 mm backset on request
- Square faceplate and strike in 304 Stainless Steel material
- Zinc alloy latch bolt

Features:

- Conforms to ANSI Grade 3 requirements
- Available finishes: SSS-Satin Stainless Steel (US32D), PB-Polished Brass (US3), AB-Antique Brass (US5), AC-Antique Copper (US11), DC-Satin Nickel (US15), PSS-Polished Stainless Steel (US32)

Security Deadbolts Key and Turn/Key Both Sides

Specifications:

- Stainless steel or brass
- Brass cylinder and keys (3 keys)
- Adjustable bolt 60-70mm backset
- Suitable for door 35-45mm thick

Features:

- Key and turn operation or key operation from both side
- Reversible for left or right hand doors

Cylinders

Not a very well-known fact, but a door lock brings only 50% security to your door. The rest 50% is looked after by your door cylinder. Even if you're sure your lock is secure, your home security might still be at risk – and changing your cylinder can help eliminate this risk.

Listed below are some of the many reasons why you should consider changing your existing door cylinders to a high quality Yale cylinder.

- You moved into a new house or apartment
- You've lent your key to someone in the past
- You've lost your keys
- Your child has lost a key or let a friend borrow it
- It's a great opportunity to improve lock security
- You've experienced a break-in or attempted break-in
- Your locks are worn, old and difficult to use
- You have carried out other home improvements
- Total peace of mind

Patented Cylinders	155
Non-patented Cylinders	165

Cylinder Type

Cylinder Components

- 1. Core
- 2. Locking pin
- 3. Cam
- 4. Housing pin with spring
- 5. Cylinder housing

How to Measure your Cylinder

How to Change your Cylinder

Application

Locking cylinders are categorized according to:

BS EN Standards for Cylinders

Specification:

BS EN 1303: 2005 classifies cylinders for locks using an 8 digit coding system. A broadly similar classification system is used for other building hardware product standards. Each digit refers to a particular feature of the product measured against the standard’s performance requirements.

- **Digit 1: Category of use**
One category is identified.
Grade1: Keys shall resist a torque of 2.5Nm and still be usable.
- **Digit 2: Durability**
Three grades are identified according to the number of test cycles achieved:
Grade 4: 25,000 cycles
Grade 5: 50,000 cycles
Grade 6: 100,000 cycles
- **Digit 3: Door mass**
No requirement.
- **Digit 4: Fire resistance**
Two grades are identified as follows:
Grade 0: not suitable for fire/smoke resistant door assemblies
Grade 1: suitable for fire/smoke resistant door assemblies subject to satisfactory assessment of the contribution of the cylinder to the fire resistance of the specified fire/smoke door assemblies. Such assessment is beyond the scope of this European standard (see EN 1634-1).
- **Digit 5: Safety**
No requirement.

Example:

The following marking denotes a cylinder meeting the required category of use Grade 1, durability Grade 6 (100,000 cycles), no requirement for door mass, no fire resistance or safety in use requirement, having Grade A corrosion resistance, Grade 4 key related security and Grade 1 attack resistance.

- **Digit 6: Corrosion and temperature resistance**
Four grades are identified as follows:
Grade 0: no corrosion or temperature resistance requirements
Grade A: BS EN 1670 Grade 3 corrosion resistance (96 hours NSS): no temperature resistance requirement
Grade B: No corrosion resistance requirement: resistance to -20 / +80°C temperature extremes
Grade C: BS EN 1670 Grade 3 corrosion resistance: resistance to -20 / +80°C temperature extremes

Note:

- No distinction is made between the inside and the outside of either the cylinder and/or the door.
- On completion of the test, the cylinder must operate using a maximum 1.5 Nm torque on the key.

- **Digit 7: Key related security**
Six grades are identified and the principal requirements are summarised in the table below:

	Grade					
	1	2	3	4	5	6
Minimum number of effective differs	100	300	15.000	30.000	30.000	100.000
Minimum number of movable levers, pins, discs, etc.	2	3	5	5	6	6
Coding on key should disclose combination	Yes	Yes	No	No	No	No
Torque resistance of plug	2.5Nm	5Nm	15Nm	15Nm	15Nm	15Nm

- **Digit 8: Attack resistance**
Three grades are identified and the principal requirements are summarised in the table below:

	Grade		
	0	1	2
Resistance to drilling (net drilling time)	-	3 mins	5 mins
Resistance to chisel attack (number of defined lows)	-	30	40
Resistance to twisting attack (number of defined twists)	-	20	30
Resistance to plug/cylinder extraction (pull load)	-	15 kN	15 kN
Torque resistance of plug/cylinder	-	20Nm	30Nm

Patented Cylinders

Yale patented cylinders let you have control over who has access to the keys to your cylinder. The blank keys for patented cylinders are controlled by Yale and can only be cut by authorised dealers, thus giving you protection from unauthorised key duplication.

2000 Plus Series	159
1000 Plus Series	161
500 Plus Series	163

Why buy patented cylinders?

Protection against unauthorised key duplication

The security of any keyed system can quickly be compromised if keys are lost or not returned. Controlling who has access to keys can be further compromised if key blanks are available on any high street. The blank keys for patented cylinder are controlled by Yale and can only be cut by authorised dealers. With our 1000 and 2000 plus series patented cylinders, you will be required to present your key order card to your authorised dealers for key duplication.

Patent protection: Our cylinders are protected by the following patent: EP1523603B1

Higher security than any other cylinder: Our range of patented cylinders offers enhanced resistance to picking, drilling and other forms of lock manipulation.

Anti-picking protection: Anti-picking protection is provided by special pins inside the cylinder.

Anti-drilling protection: Special pins also provide anti-drill protection.

Snap protection: Security is not compromised even if cylinder is attacked through snapping.

500 Plus series – Euro profile cylinder and turn

- Standard Euro Profile Cylinder – 5 pins
- Available in polished brass and satin nickel, chrome & antique brass
- Available as single, double and turn Euro profile cylinder

1000 Plus series – Euro profile cylinder and turn

- Standard security Euro Profile cylinder with dimple keys – 6 pins
- Available in polished brass and satin nickel, chrome & antique brass
- Available as single, double and turn Euro profile cylinder

2000 plus series – Euro profile cylinder and turn

- High security Euro profile cylinder with dimple keys – 10 pins
- Available in polished brass and satin nickel, chrome & antique brass
- Available as single, double and turn Euro profile cylinder

			
Range	2000 Plus	1000 Plus	500 Plus
Patent	Y	Y	Y
No. of keys	5	5	3
No. of pins	10	6	5
Anti-drill	Y	-	-
Anti-pick	Y	Y	Y
Key card	Y	Y	-

Your advantages

- The blank keys for patented cylinder are controlled by Yale and can only be cut by authorised dealers
- Security card for proof of ownership for extra keys (1000/2000 plus series)
- Key blanks are not available in the high street
- Patent protection
- Conforms to EN 133:2015

Patented

The Yale non patented cylinder - the front face of the plug creates a stopper for the key shoulder. On the patented version there is a bottom groove that makes a stopper for the key shoulder to fit. Therefore, a non patented key would not fit in a patented cylinder.

Non-Patented

There is a clear difference between key shoulders of these two versions too. The non-patented one has a key shoulder of the full key thickness while the patented one's shoulder is reduced to 1.75 mm.

Patented Cylinder Range

2000 Plus Series

Specifications:

- Double euro profile cylinder - Key + Key
- High Security
- Brass Material
- Tested to EN 1303:2005
- Finish available - Satin Nickel, Polished Brass, Antique Brass, Polished Chrome
- Type: Available as single, double and turn Euro profile cylinder

Features:

- Yale patented
- Reversible key
- 10 pins
- Supplied with 5 keys
- Anti picking
- Anti drill
- Key Card

Non-patented Cylinders

Commonly known as pin tumbler Euro profile cylinders, these non-patented cylinders use a mechanism that consist of pins of various lengths to keep the lock secure and enable it to open only with the respective Yale key. The range of cylinders from Yale consists of cylinders of all security standards and are easy to install either the DIY way or by a locksmith. Euro cylinders are commonly fitted to a multipoint lock or sometimes with a mortice lock. They are normally used on external front and back doors. It is important to fit the cylinder correctly, or it will be at risk to lock snapping or other forms of attack.

Safes

The Yale Safe Collection has been designed by combining the latest technologies and materials, with centuries of experience, to create safes that meet the most demanding requirements. Yale's collection includes safes featuring different sizes and security grades. Protect jewellery, important documents, cash, computer drives, and other valuables with domestic and commercial safes - available in a range of sizes to suit every need. Choose from alarmed safes and motorised safes, to safes with touchpad interfaces.

High Security Fire Safes

Specifications:

- You can choose between 1 - 48 hours lockdown mode for added security whilst away from home
- Option to switch the sound off when entering the code or when the safe is opening
- Hinge protected for extra security - Locking points on both sides of the safes, 16mm locking bolts in the frame and 18mm fixed bolts on the hinge side
- High security lock with hardened steel plates protecting the mechanism from attack
- Adjustable internal shelf
- Epoxy sealed shell of galvanised steel gives double rust protection
- Tested & accredited according to sold secure silver security standard

Features:

- Tested to withstand minimum 1 hour of intense heat at 972 degrees
- Emergency battery opening and low battery alarm signal (9v battery not supplied)
- Touch screen keypad wakes with over 1 billion possible codes
- Resettable 3-12 digit user code
- Programmable one-time user code - ideal for visiting guests who may need to use the safe for a short period
- Privacy number input – real code followed or preceded by random numbers opens the lock. Assists if you suspect your code is being observed by an onlooker
- Silent input – code can be entered without noise or light
- Time lock (if wrong code entered) can be set from 3 to 9 minutes (factory set 3 minutes)
